

VertexFX Profit Distributor Plugin

VertexFX Profit Distributor Is a Backoffice plug-in that connects with a dealer which is used to distribute the profit or the loss between accounts that is located under the group username that is placed in the screen. It will deposit or Withdraw the profit or loss amount based on the equity for each account multiplied by the percentage you put, if the percentage is positive it will deposit money, if it is negative it will withdraw money.

For example, if you have a total profit of 3% of the money, you can put the group username for the Money Manager, and put the percentage as 3. For each money transaction done, it will add a description to this transaction depending on the symbol name you choose from the screen, and the Date/Time for this operation.

The description can be customized as needed, and you can add the variables as:

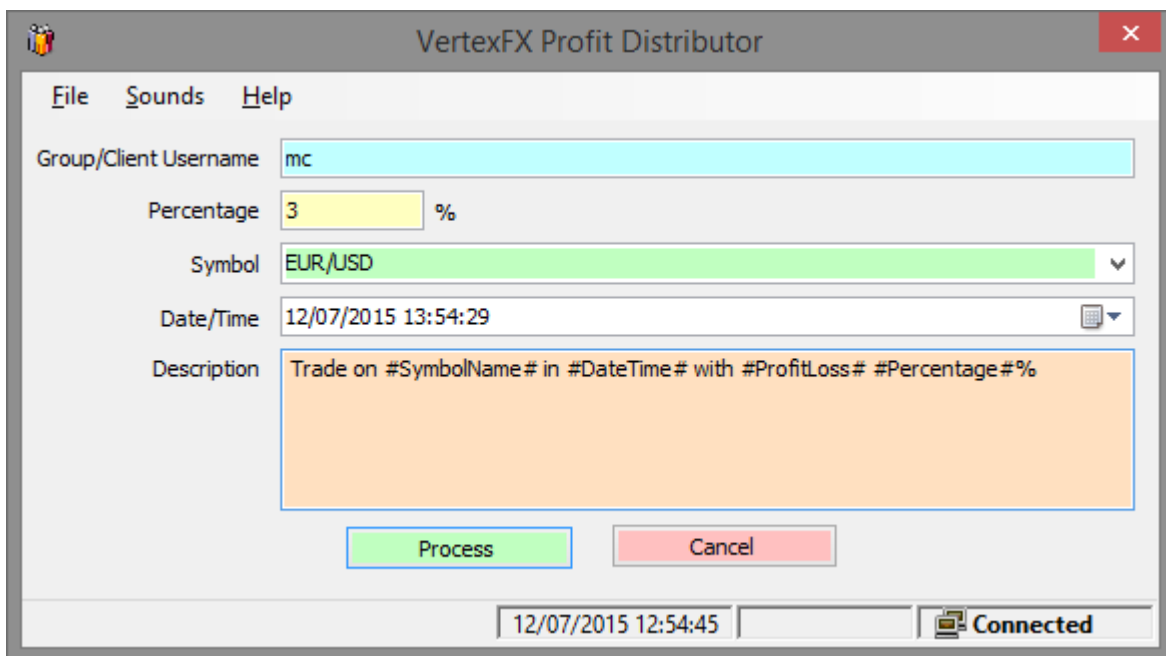

#Percentage# will be replaced by the percentage you put in the settings.

#SymbolName# will be replaced by the Symbol name you put in the settings.

#DateTime# will be replaced by the Date/Time you put in the settings.

#ProfitLoss# will be replaced either by the word (Profit) or (Loss) based on the percentage you put, if negative then loss, if positive then Profit.

The below screen shows the overall plug-in look with all fields.

The screenshot shows the 'VertexFX Profit Distributor' window. It has a menu bar with 'File', 'Sounds', and 'Help'. The main area contains several input fields: 'Group/Client Username' with the value 'mc', 'Percentage' with the value '3' and a '%' sign, 'Symbol' with a dropdown menu showing 'EUR/USD', 'Date/Time' with the value '12/07/2015 13:54:29', and 'Description' with the text 'Trade on #SymbolName# in #DateTime# with #ProfitLoss# #Percentage#%'. At the bottom, there are 'Process' and 'Cancel' buttons. A status bar at the very bottom shows the current date and time '12/07/2015 12:54:45' and a 'Connected' status with a small icon.
